

Novel Parametric Light Generator and Monochromator

Tech ID: 21783 / UC Case 2011-289-0

TECHNOLOGY DESCRIPTION

Developed here is a fiber optical parametric amplifier to realize a wide-range tunable, high-sweep rate, frequency-swept light source. The invention provides for the following:

- ▶ Generation of fast, wide-band, wavelength swept light.
- ▶ Analysis of spectral content in arbitrary wavelength bands.
- ▶ Amplification and frequency conversion of selected spectral slices in a wideband optical signal.

APPLICATIONS

Applications for the above work can be found in:

- ▶ Frequency swept-light sources and spectral analyzers
- ▶ Optical add-drop multiplexers
- ▶ Fast tunable spectral discriminators
- ▶ Frequency controlled optical switches

INTELLECTUAL PROPERTY INFO

This work is fully prototyped and available to license worldwide.
