

CELL LINES AND TRANSGENIC MICE CONTAINING FATTY ACID SYNTHASE PROMOTER-LUCIFERASE CONSTRUCTS

Tech ID: 18470 / UC Case 1997-036-0

ABSTRACT

Fatty acids synthase (FAS) plays a central role in de novo lipogenesis in mammals and birds. FAS activities and concentrations in animals? liver and adipose tissues are subjective to nutritional and hormonal manipulations.

This disclosure relates to cell lines and transgenic mice containing fatty acid synthase promoter-luciferase constructs.
