

Monoclonal Antibodies to Soluble Human MD-2

Tech ID: 19253 / UC Case 2003-058-0

TECHNOLOGY DESCRIPTION

MD-2 is an adapter protein of an innate immunity receptor, toll-like receptor 4. Thirteen hybridoma cell lines have been generated that produce mAbs specific to soluble human MD-2. These Abs have been characterized and have applications in immunological assays and functional studies. Some of the mAbs cross-react with mouse MD-2.
