# Binary Digit Multiplication and Applications

Tech ID: 20005 / UC Case 2005-046-0

# **TECHNOLOGY DESCRIPTION**

UC San Diego inventors have invented a method for multiplying binary digits in a rapid and memory-efficient manner. It does not use the traditional positional-value system. This method has the additional benefit of using small computers with less memory and can generate bounds (upper and lower) on the significant digits in advance of having the complete multiplication result.

# **APPLICATIONS**

Applications include linear programming, digit multiplication, computer graphics, and communications.

# **PATENT STATUS**

Country	Туре	Number	Dated	Case
United States Of America	Issued Patent	7,565,391	07/21/2009	2005-046
