### **C-myc Transgenic Mouse**

Tech ID: 20532 / UC Case 2002-135-0

#### **INNOVATION**

UCLA Researchers have developed a novel mouse model for prostate cancerwhich will be useful for preclinical trials and biochemical assays. Themouse model is unique in that it incorporates a naturally occuring oncogeneimplicated in a significant fraction of human prostate cancer and accurately reflects the gradual progression of human prostate cancer from prostatic intraepithelial neoplasia (PIN) to localized adenocarcinoma, to locallyinvasive disease and metastatis, with essentially 100% penetrance. The timecourse of disease progression allows therapeutic testing against all stagesof disease, including prevention strategies. The model offers significant advantages over current transgenic prostate cancer models such as TRAMP, which require expression of the SV40 T antigen and generate mice with alarge percentage of neuroendocrine, rather than adenocarcinomas of theprostate.

#### **PATENT STATUS**

Country	Туре	Number	Dated	Case
Patent Cooperation Treaty	Reference for National Filings	WO 04/000010 A3	12/31/2003	2002-135

Patent Pending
