

Lipolysis with Fine Spatiotemporal Control

Tech ID: 22951 / UC Case 2012-352-0

TECHNOLOGY DESCRIPTION

University researchers have developed a new method and associated agents to reduce and remove fatty tissue. The method enables tunable melting of fat (lipolysis) and the tightening of skin only in surgeon-defined regions with fine spatial and temporal control. The technique has been demonstrated *in vitro* and animal trials are underway.

INTELLECTUAL PROPERTY INFO

This invention has a patent pending and is available for licensing.
