

ASYMETRIC ELECTROPHILIC FLUORINATION USING AN ANIONIC CHIRAL PHASEE-TRANSFER CATALYST

Tech ID: 23405 / UC Case 2012-047-0

PATENT STATUS

| Country | Type | Number | Dated | Case |
|--------------------------|---------------|-----------|------------|----------|
| United States Of America | Issued Patent | 9,981,977 | 05/29/2018 | 2012-047 |

BRIEF DESCRIPTION

The invention is a novel family of chiral catalysts for electrophilic addition reactions especially for fluorination. The catalysts are salts including a chiral anionic component a a cationic component. They are chiral, non-racemic compounds that function as phase transfer catalysts in certain asymmetric synthetic organic transformations.

SUGGESTED USES

The ability to selectively transform a prochiral center in a compound to an enantiomerically enriched or enantiomerically pure chiral center has broad application, especially in the agricultural, pharmaceutical and polymer industries.

ADVANTAGES

Transform a prochiral center in a compound to an enantiomerically enriched or enantiomerically pure chiral center.
