Monoclonal Antibodies Against GPIHBP1

Tech ID: 23751 / UC Case 2014-255-0

INNOVATION

Researchers at UCLA have developed monoclonal antibodies that recognize mouse and human glycosylphosphatidylinositol-anchored high density lipoprotein binding protein 1 (GPIHBP1).

- ▶ Rat monoclonal antibody, 11A12, against mouse GPIHBP1
- ▶ Mouse monoclonal antibody against human GPIHBP1

BACKGROUND

Dietary fats are packaged by the intestines into triglyceride-rich lipoproteins called chylomicrons. The triglycerides in chylomicrons are hydrolyzed by lipoprotein lipase (LPL) along the luminal surface of capillaries, mainly in heart, skeletal muscle, and adipose tissue. GPIHBP1 is a capillary endothelial cell protein that provides a platform for LPL-mediated processing of chylomicrons (Beigneux et al., 2007 [PubMed 17403372]).

APPLICATIONS

Western, IHC, ICC
