

Morphology-Controlled Cathode Materials for Lithium Ion Batteries

Tech ID: 25461 / UC Case 2014-261-0

TECHNOLOGY DESCRIPTION

University researchers have developed methods and compositions that pertain to morphology-controlled materials for use as lower-cost, high energy density cathodes in lithium ion batteries. These materials have the potential to significantly increase the overall energy density of state-of-the-art lithium ion batteries which would be good candidates for onboard storage for electric vehicles and mobile power.

This technology has a patent pending and is available for licensing and/or sponsored research.
