RNA WRITING: PROGRAMMABLE SPLICING FOR TRANSCRIPTOME ENGINEERING

Tech ID: 32784 / UC Case 2022-112-0

PATENT STATUS

Country	Туре	Number	Dated	Case
Patent Cooperation Treaty	Reference for National Filings	WO 2023/220672	11/16/2023	2022-112
Patent Pending				
BRIEF DESCRIPTION				
RNA splicing is a fundamental biolog	gical process, in which a pre-mRNA transcript is	s modified by the endogenous spl	liceosomal complex i	nto a mature
nRNA transcript. This standard proc	ess involves a single pre-mRNA molecule "in ci	s." Whereas methods for editing	DNA using editing	enzymes have beer
described and are currently in use for	various gene editing applications, there is a nee	ed in the art for methods of editin	g RNA.	
UC Berkeley researchers have created	d a hybrid RNA molecule comprising a targeting	g region and a donor RNA, and c	ompositions compris	ing the hybrid
RNA molecule which is useful in me	thods of modifying a target RNA by employing	a splicing reaction that joins two	distinct RNA molect	ales "in trans."
SUGGESTED USES				
» RNA editing
