

REAGENTS TO STUDY THE STRUCTURE AND FUNCTION OF THE PROTOTYPE MAP KINASE SCAFFOLD PROTEIN, STE5

Tech ID: 17235 / UC Case 2003-031-0

ABSTRACT

This invention makes available plasmids designed to express derivatives of *Saccharomyces cerevisiae* Ste5 protein tagged with an N-terminal in-frame (His)₆ tract and a c-Myc epitope recognized by the monoclonal antibody, 9E10, and /or fused in-frame at either its N- or C-terminus to the *Aequoria victoria* Green Fluorescent Protein (GFP), or mutant derivatives of Ste5 in these contexts.
