BRIEF DESCRIPTION

UC researchers have discovered a novel use of proteins denoted CasLamda/Cas12L

within the Type V CRISPR Cas superfamily distantly related to CasX, CasY and other published type V sequences. These CasLamda/Cas12L proteins utilize a guide RNA to perform RNA-directed cleavage of DNA. The researchers have developed compounds and structures for use in in editing plant cells.

SUGGESTED USES

- » Targeted genome editing of plant cells
- » Targeting of proteins bound to CasLamda/Cas12L to a specific locus of a genome
