

Gene Targets For Manipulating T Cell Behavior

Tech ID: 33261 / UC Case 2020-043-0

TECHNOLOGY DESCRIPTION

By performing non-viral pooled knock-in screens, UCSF investigators have discovered novel genes that improve T cell functionality across a variety of in vitro assays. This invention includes novel compositions and methods for modifying the genome of a T cell to alter its specific and functionality, while limiting the side effects associated with T cell therapies.

Technology Advantages:

- ▶ Identifies novel gene targets
- ▶ Potential to enhance therapeutic potency of T cells for cancer and autoimmune applications
